Version 1.2.0
October 1st, 2023

Glossary for the Digital Design Professional

Preface

This glossary defines the core terminology in Digital Design. The definitions of the terms remain in English to avoid translation ambiguities. However, all terms of the glossary have been translated in the “Deutsch – Englisch Wörterbuch”. The glossary complements the Digital Design Professional Syllabus for the Foundation Level [DDP2023] and the handbook of the Digital Design Professional [LGea2023]. It is intended as a reference document for professionals in Digital Design, for students or professionals taking a training or a certification exam in Digital Design, and for training providers who give trainings in Digital Design.

Terms of Use

All contents of this document, especially texts, photographs, graphics, diagrams, tables, definitions and templates, are protected by copyright. All (co-)authors of this document have transferred the exclusive right of use to IREB e.V.

Any use of this document or its components, in particular copying, distribution (publication), translation, or reproduction, requires the prior consent of IREB e.V.

Any individual is entitled to use the contents of this document within the scope of the acts of use permitted by copyright law, in particular to quote these correctly in accordance with recognized academic rules.

Educational institutions are entitled to use the contents of this document for teaching purposes under correct reference to the work.

Use for advertising purposes is only permitted with the prior consent of IREB e.V.

Acknowledgements

We thank everybody for their involvement.

Sources

As Digital Design is a new field, many definitions in this glossary are new. They are based on our experience and on existing terminology in creative design. When defining existing terms such as stakeholder or system, we strived for alignment with the IREB Glossary of Requirements Engineering Terminology [Glin2020]. For terms not defined in that glossary (e.g., client, function or interface), we consulted various sources (e.g., [ErMa2008], [ISO9000], [ISO24765], [ISO19506], [ISO25010], [McEl2017], [RiWe1973]).

However, as there is much variety and inconsistency in the definitions provided by these sources, we did not copy-paste any definitions, but carefully re-formulated all definitions consistently and according to their intended use in Digital Design.

For cross-checking, we also consulted the Merriam-Webster online dictionary (<https://www.merriam-webster.com>) and Wikipedia (<https://en.wikipedia.org>).

Glossary for the Digital Design Professional

Version History

Version	Date	Comment
1.0.0	2021/07/30	First version of the German DDP glossary
1.1.0	2022/03/01	Updated definition of "Context in Digital Design" Added gender conform terms for client, customer, user Updated German term for solution evaluation concept Updated German term for work product
1.2.0	2023/10/01	Update of the following terms to reflect the updated DDP syllabus and handbook version 2.0: Construction, Design concept, Digital Design, Realization, Realization concept.

Glossary for the Digital Design Professional

Table of Content

Deutsch – Englisch Wörterbuch 5

Definition of Terms 7

Deutsch – Englisch Wörterbuch

Deutsch	English
Arbeitsauftrag	Work item
Arbeitsprodukt (auch: <i>Arbeitsergebnis</i>)	Work product
Artefakt	Artifact
Auftraggeber, Auftraggeberin	Client
Benutzer, Benutzerin	User
Benutzerschnittstelle, User Interface	User interface
Design, Gestaltung	Design
Designkonzept	Design concept
Digital (als Substantiv)	Digital (as a noun)
Digital Design	Digital Design
Digital Design Brief	Digital Design brief
Digitale Lösung	Digital solution
Digitales Material	Digital material
Digitales System	Digital system
Elementdesignkonzept	Element design concept
Elementevaluationskonzept	Element evaluation concept
Elementrealisierungskonzept	Element realization concept
Epic	Epic
Evaluationskonzept	Evaluation concept
Lösungsevaluationskonzept	Solution evaluation concept
Evaluierung	Evaluation
Form (im Digital Design)	Form (in Digital Design)
Funktion (im Digital Design)	Function (in Digital Design)
Gerätedesignkonzept	Device design concept
Hardware-Schnittstelle	Hardware interface
Iteration	Iteration

Glossary for the Digital Design Professional

Deutsch	English
Konstruktion (im Digital Design)	Construction (in Digital Design)
Kontext	Context
Kunde, Kundin	Customer
Lösungsdesignkonzept	Solution design concept
Persona	Persona
Problem	Problem
Product Owner	Product owner
Prototyp	Prototype
Prozess	Process
Qualität (im Digital Design)	Quality (in Digital Design)
Realisierung (im Digital Design)	Realization (in Digital Design)
Realisierungskonzept (im Digital Design)	Realization concept (in Digital Design)
Schnittstelle	Interface
Softwaredesignkonzept	Software design concept
Software-Schnittstelle	Software interface
Soziotechnisches System	Socio-technical system
Stakeholder	Stakeholder
Story Map	Story map
System	System
Systemdesignkonzept	System design concept
Systemevaluationskonzept	System evaluation concept
Systemrealisierungskonzept	System realization concept
Umfang (einer digitalen Lösung)	Scope (of a digital solution)
Use Case (im Digital Design)	Use case (in Digital Design)
User Story	User story

Definition of Terms

Artifact / [Artefakt](#)

Synonym for ↑work product.

Client / [Auftraggeber, Auftraggeberin](#)

A person or organization who orders a ↑system or a solution to be built.

Construction (in Digital Design) / [Konstruktion \(im Digital Design\)](#)

The creation of the realization concept of a digital solution that will create the desired transformation.

Context / [Kontext](#)

In general: The network of thoughts and meanings needed for understanding phenomena or utterances.

Especially in Digital Design: The part of the environment of a ↑digital solution or a ↑digital system that is relevant for understanding and building a digital solution.

Note

This includes important ↑stakeholders and, in particular, the potential ↑customers and ↑users of the digital system.

Customer / [Kunde, Kundin](#)

A person or organization who receives a ↑system, a product or a service.

Note

- In Digital Design, the product or service received is a ↑digital solution. “Receiving” includes both buying a solution or obtaining it for free.
 - Beyond its intended customers, a digital solution may also have *indirect* customers. This can be the case, e.g., when customers employ a digital solution for improving non-digital services that they provide to their customers.
-

Design / [Design, Gestaltung](#)

A plan or drawing produced to show how something will look, function or be structured before it is made.

The activity of creating a design.

Note

Designing means envisioning and properly describing a desired future by means of ↑design concepts.

Design concept / [Designkonzept](#)

A description of the design of a ↑digital solution, of a ↑digital system or of an element of a digital solution.

Device design concept / [Gerätedesignkonzept](#)

An ↑element design concept for a hardware device which is part of a ↑digital solution.

Digital (as a noun) / [Digital \(als Substantiv\)](#)

The structure, flow, and transformation of binary data.

Digital Design / [Digital Design](#)

The creative and holistic ↑design of ↑digital solutions.

Digital Design brief / [Digital Design Brief](#)

The description of the ↑context, vision, ↑scope, and general terms for building a ↑digital solution.

Digital material / [Digitales Material](#)

The technological means that enable the ↑Digital, that is, the structure, flow, and transformation of binary data.

Digital solution / [Digitale Lösung](#)

A [↑](#)socio-technical system that solves a real-world problem with digital means.

Note

A digital solution:

- is primarily realized by a [↑](#)digital system which achieves certain objectives,
- is always contextualized, i.e., it solves a problem in a certain [↑](#)context,
- shapes the context as far as it is within the [↑](#)scope of the digital solution.

Digital system / [Digitales System](#)

A technical [↑](#)system that realizes a [↑](#)digital solution in a given context with digital means, that is, by processing, transporting and storing binary data.

Element design concept / [Elementdesignkonzept](#)

The description of the element-relevant objectives, and of the [↑](#)form, [↑](#)function, and [↑](#)quality of an element of a [↑](#)digital solution.

Element evaluation concept / [Elementevaluationskonzept](#)

The [↑](#)evaluation concept for an element of a [↑](#)digital solution.

Element realization concept / [Elementrealisierungskonzept](#)

The description of the technically relevant element objectives, and of the technical [↑](#)form, [↑](#)function, and [↑](#)quality of an element of a [↑](#)digital solution.

Epic / [Epic](#)

In agile development: An abstract description of a [↑](#)stakeholder need which is larger than what can be implemented in a single [↑](#)iteration.

In Digital Design: A [↑](#)work item that describes a characteristic of a [↑](#)digital system that provides value for [↑](#)stakeholders.

Evaluation / [Evaluierung](#)

A systematic ↑process for determining the value, quality or appropriateness of something.

Note

In Digital Design, evaluation particularly determines whether a ↑digital solution or a ↑work product used for creating a digital solution actually has the qualities and properties that it should have according to the ↑design concepts and the ↑stakeholders' needs.

Evaluation concept / [Evaluationskonzept](#)

A description of the ↑evaluation approach for a ↑work product.

Form (in Digital Design) / [Form \(im Digital Design\)](#)

The elements and the relationships between the elements of a ↑system that constitute the structure of the system.

Function (in Digital Design) / [Funktion \(im Digital Design\)](#)

The capabilities provided by an element of a ↑system, by a combination of elements, or by the system as a whole.

Note

The notion of function in design is different from those used in mathematics and computing:

- In mathematics: A mapping between two sets, called domain and range, which associates every element of the domain with at most one element of the range.
- In computing: The transformation of input data into output data.

Hardware interface / [Hardware-Schnittstelle](#)

An ↑interface between an element of a ↑system and a device.

Note

We distinguish *perceivable* hardware interfaces that let ↑users interact with a device and *underlying* hardware interfaces, where a system element interacts with a device in a way that is not perceivable for the users of the system.

In ↑digital systems, hardware interfaces include, for example, displays, audio input and output, and communication hardware.

Interface / [Schnittstelle](#)

A shared boundary across which information is passed.

Note

In ↑digital solutions, interfaces may exist, for example, between:

- components of a ↑digital system,
- an element of a digital system and a device,
- an element of a digital system and its ↑user(s),
- a digital system and a neighboring system which is not part of the digital solution.

Iteration / [Iteration](#)

In general: The repetition of something, for example, a procedure, a process or a piece of program code.

In agile development: A timeboxed unit of work in which a development team implements an increment to the ↑system under development.

Persona / [Persona](#)

A fictitious character representing a group of people with similar needs, values and habits who are expected to use a ↑system or benefit from it in a similar way.

Process / [Prozess](#)

A set of interrelated activities performed in a given order to process information or materials.

Problem / [Problem](#)

A difficulty, open question or undesirable condition that needs investigation, consideration, or solution.

Note

In Digital Design, we distinguish between tame problems and wicked problems:

- A *tame problem* is a problem that is well defined with clear and stable requirements.
- A *wicked problem* is a problem that is difficult or impossible to solve because of incomplete, contradictory, and changing requirements.

Product owner / [Product Owner](#)

A person responsible for a product in terms of functionality, value and risk.

Prototype / [Prototyp](#)

In manufacturing: A piece which is built prior to the start of mass production.

In software and systems engineering: A preliminary, partial realization of certain characteristics of a [↑](#)system.

In design: A preliminary, partial instance of a design solution.

Note

In Digital Design, prototypes are used according to definition 3 above. They can serve as

- a manifestation of ideas for a future [↑](#)digital solution,
- a model for later stages or the final version of a digital solution,
- a means for obtaining early feedback from [↑](#)stakeholders.

Quality (in Digital Design) / [Qualität \(im Digital Design\)](#)

In general: The degree to which a set of inherent characteristics of an item fulfills requirements.

In systems and software engineering: The degree to which a [↑system](#) satisfies stated and implied needs of its [↑stakeholders](#).

In design processes: The selection of those system elements and relationships from a universe of design options that are best suited to satisfy the needs of the [↑users](#) of a system.

Note

In Digital Design, “item” in the sense of Definition 1. pertains to the elements, relationships and capabilities of a system, as well as to the interaction between them.

Digital Design must handle quality in the sense of all of three definitions given above:

- The inherent characteristics of elements, relationships or capabilities of a system have to be defined explicitly, so that quality can be evaluated.
- Digital systems and solutions must satisfy the needs of their stakeholders.
- In the design process, quality emerges by analyzing and researching the design space for a given problem and selecting the best suited options.

Quality in the above sense means fitness for intended use. This is in contrast to the colloquial notion of quality which is typically connoted with goodness or excellence.

Realization (in Digital Design) / [Realisierung \(im Digital Design\)](#)

1. The implementation of a digital solution according to the defined design concepts and realization concepts.
2. The act of creating a realization.

Realization concept (in Digital Design) / [Realisierungskonzept \(im Digital Design\)](#)

A description of the technical realization of a [↑digital](#) solution.

Scope (of a digital solution) / [Umfang \(einer digitalen Lösung\)](#)

The range of things that can be shaped and designed when building a ↑digital solution.

Note

Describing the scope of a digital solution also includes important constraints, such as technological and functional limits.

Socio-technical system / [Soziotechnisches System](#)

A ↑system spanning software, hardware, people and organizational aspects.

Software design concept / [Softwaredesignkonzept](#)

An ↑element design concept for an element of a ↑digital solution that is realized with software.

Software interface / [Software-Schnittstelle](#)

An ↑interface between a software element of a ↑system and an element of the same system or of another system.

Solution design concept / [Lösungsdesignkonzept](#)

The description of the goals, the business model and the overall idea of a ↑digital solution.

Solution evaluation concept / [Lösungsevaluationskonzept](#)

The ↑evaluation concept for a ↑digital solution.

Stakeholder / [Stakeholder](#)

A person or organization who influences a ↑system's requirements or who is impacted by that system.

Note

In Digital Design, the stakeholders' requirements influence a ↑digital solution. Furthermore, they may be impacted by a digital solution.

Story map / [Story Map](#)

A two-dimensional arrangement of ↑user stories.

Note

The horizontal dimension describes the narrative flow of the system, while the vertical dimension provides details for each part of the narrative flow.

System / [System](#)

In general: A principle for ordering and structuring.

In engineering: A coherent, delimitable set of elements that – by coordinated action – achieve some purpose.

System design concept / [Systemdesignkonzept](#)

The description of the system-relevant objectives, and of the overall ↑form, ↑function, and ↑quality of a ↑digital system.

System evaluation concept / [Systemevaluationskonzept](#)

The ↑evaluation concept for a ↑digital system.

System realization concept / [Systemrealisierungskonzept](#)

The description of the technically relevant system objectives, and of the overall technical ↑form, ↑function, and ↑quality of a ↑digital system.

Use case (in Digital Design) / [Use Case \(im Digital Design\)](#)

A set of possible interactions between a ↑user and an element of a ↑system that provide a benefit for the user(s) involved.

User / [Benutzer](#), [Benutzerin](#)

A person who uses the functionality provided by a [↑system](#).

Note

- When building a system, the prospective users of the system are [↑stakeholders](#).
- When building a [↑digital solution](#), users may be part of the solution to the extent that the digital solution changes the users' behavior and habits.
- A digital solution may also include non-human players who act in the role of a user, for example, animals, plants or autonomous robots.

User interface / [Benutzerschnittstelle](#), [User Interface](#)

An [↑interface](#) for the exchange of information between a [↑user](#) and a [↑system](#).

Note

- A user interface may include both hardware (e.g., displays, loudspeakers, or keyboards) and software (e.g., menus, dialog boxes, or speech recognition).
- In Digital Design, user interfaces belong to the [↑form](#) of a digital solution. However, the design of a user interface includes [↑form](#) and [↑function](#), in particular, the structure and dynamics of information exchange, as well as [↑quality](#), in particular, usability and user experience.

User story / [User Story](#)

A description of a need from a [↑user's](#) perspective together with the expected benefit when this need is satisfied.

Note

A user story constitutes a [↑work item](#) in which a user's need is realized.

Work item / [Arbeitsauftrag](#)

A coherent and documented unit of work.

Note

User stories, element evaluation tasks or defect fixing tasks are examples of work items.

Work product / [Arbeitsprodukt \(auch: Arbeitsergebnis\)](#)

A recorded, intermediate or final result generated in a work
↑process.

Synonym for ↑Artifact.
